Mutation Is All You Need – Supplementary Appendix

Extended illustrative figures from one representative run (seed 913, batch C)

This supplementary appendix contains additional illustrative figures derived from one representative run. Unlike the main quantitative figures in the article, these plots are not aggregate results across multiple runs and seeds. They are included to provide additional intuition about parent–child similarity, cumulative and stepwise drift, and the evolution of mutated HEXACO and skill dimensions across generations.

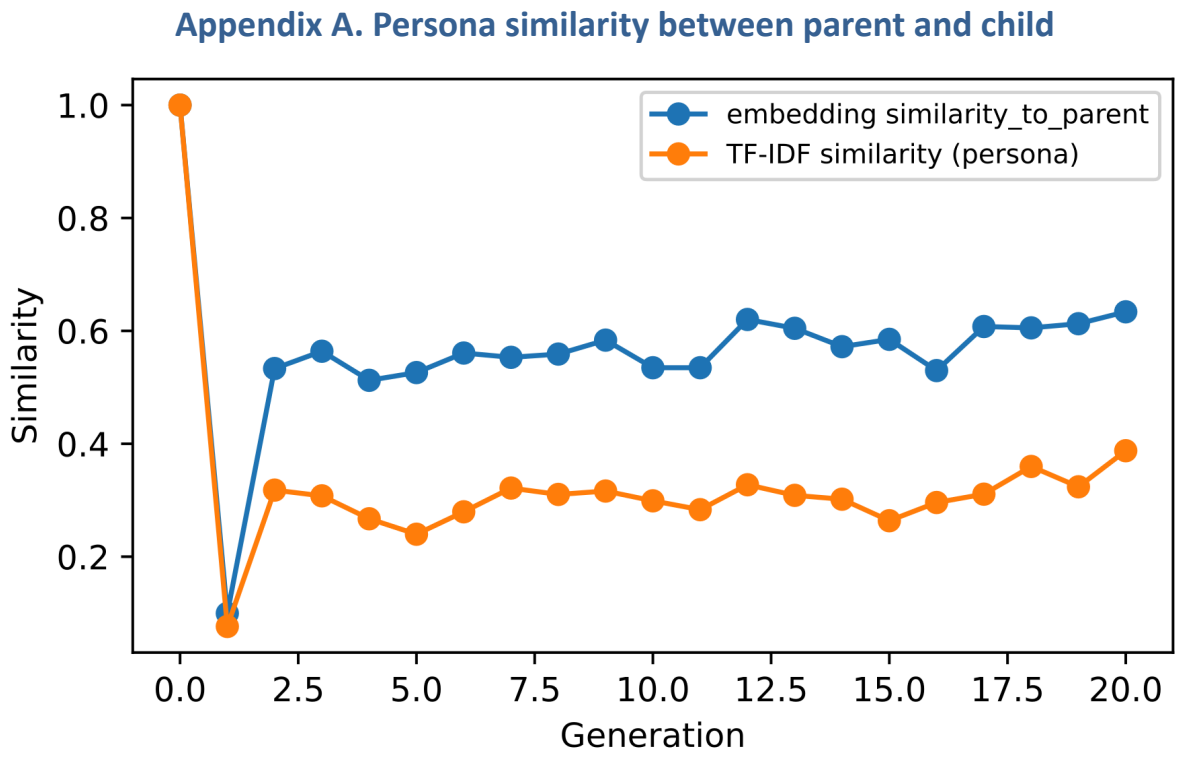

Figure A1. Parent–child similarity in persona space across generations. The plot shows embedding similarity to the parent together with TF-IDF similarity for persona-related text. This figure is illustrative and is based on one representative run.

Appendix B. Skill similarity between parent and child

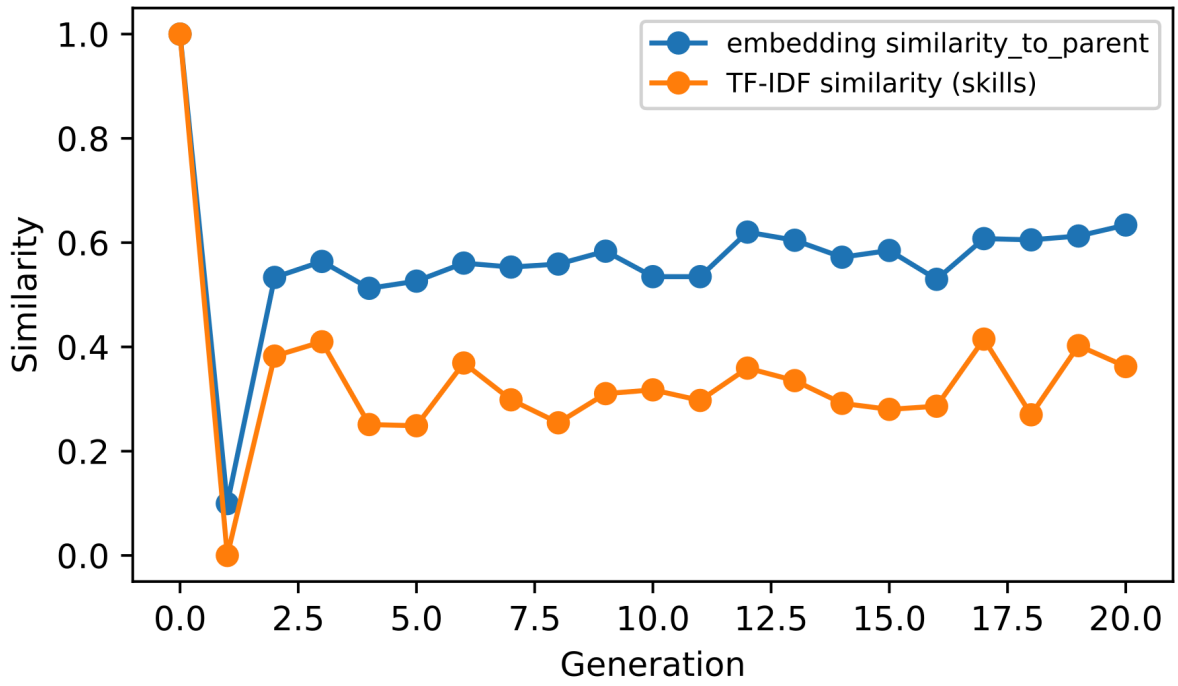

Figure B1. Parent–child similarity in skill space across generations. The plot shows embedding similarity to the parent together with TF-IDF similarity for skill-related text. This figure is illustrative and is based on one representative run.

Appendix C. HEXACO drift across generations

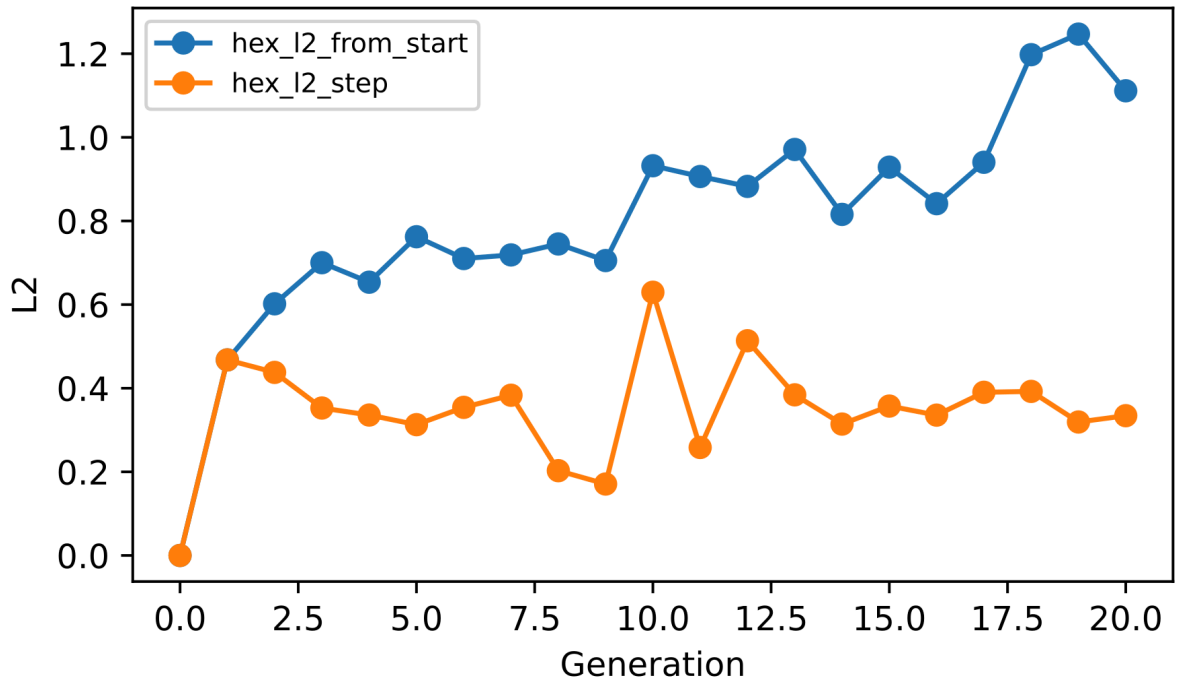

Figure C1. HEXACO drift across generations in one representative run. The plot shows both cumulative drift from the starting point and stepwise drift between adjacent generations.

Appendix D. Skill drift across generations

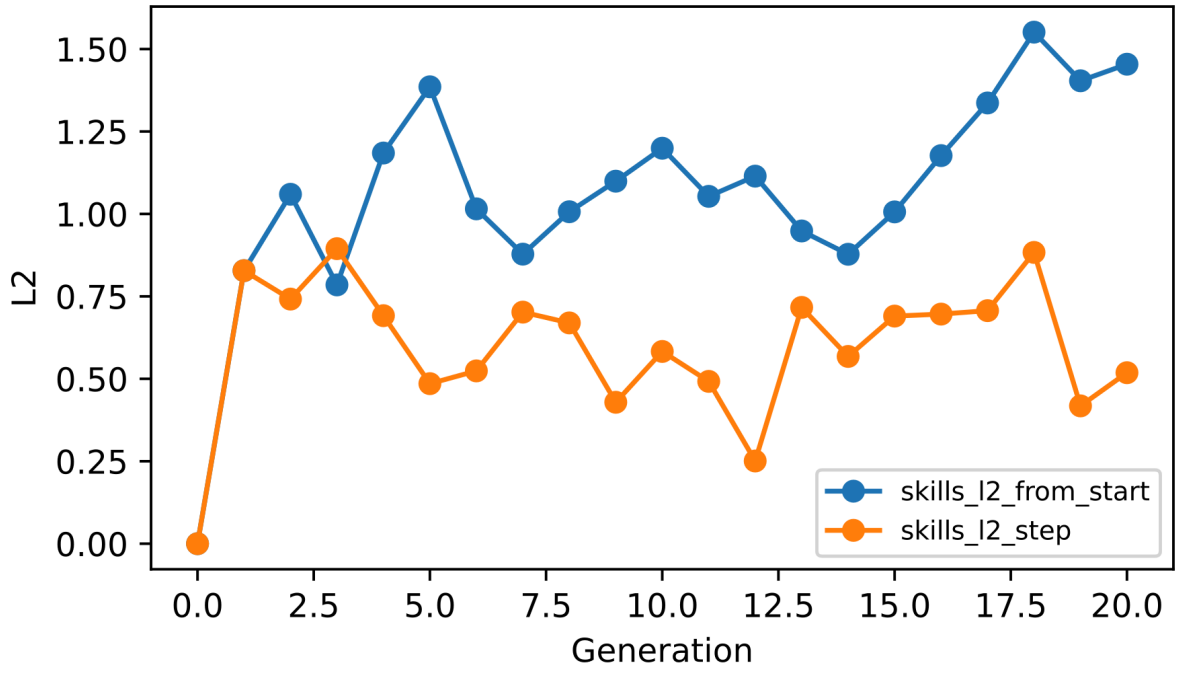

Figure D1. Skill-vector drift across generations in one representative run. The plot shows both cumulative drift from the starting point and stepwise drift between adjacent generations.

Appendix E. Mutated HEXACO traits over generations

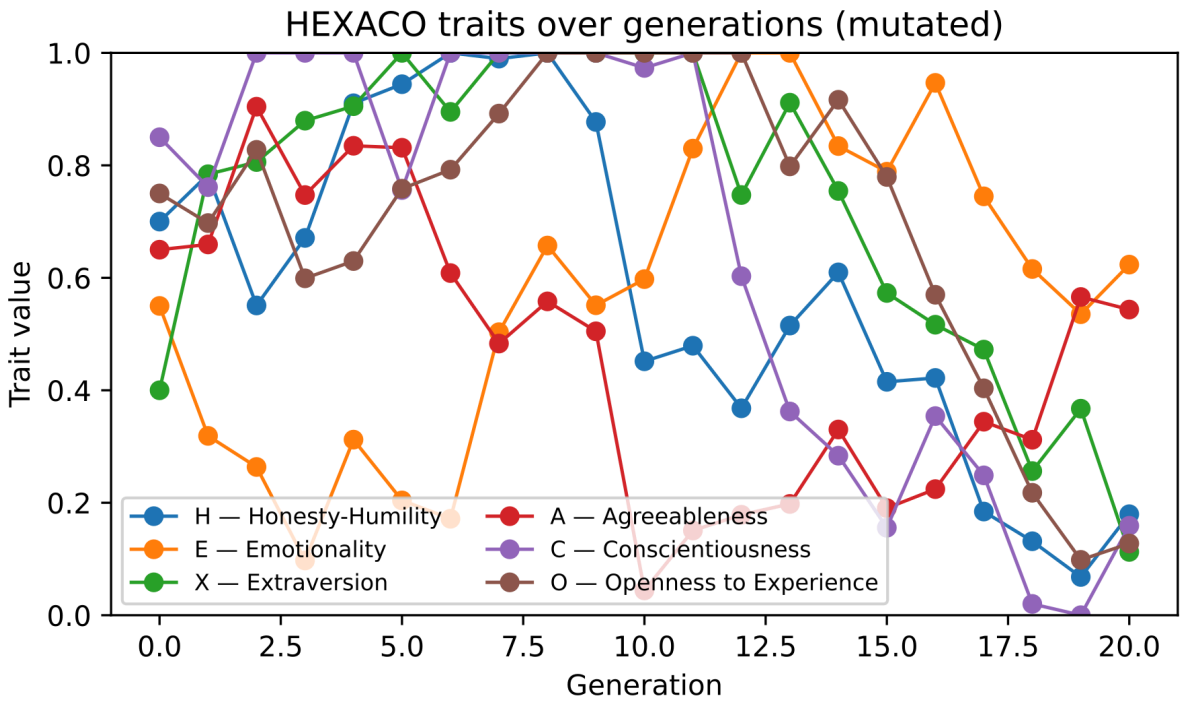

Figure E1. Mutated HEXACO trait values across generations in one representative run. The figure provides a more granular view of how the underlying personality dimensions change over the lineage.

Appendix F. Mutated skill dimensions over generations

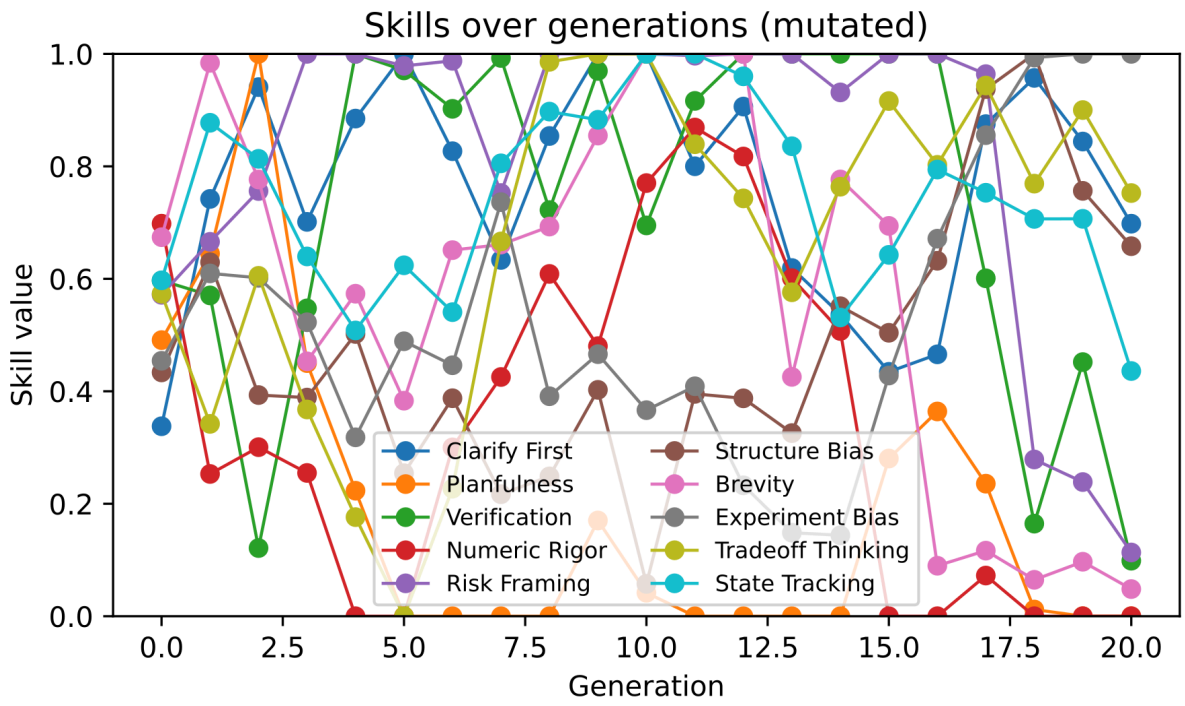

Figure F1. Mutated skill-dimension values across generations in one representative run. The figure provides a more granular view of how the internal skill vector changes over the lineage.
